RADIOFREQUENCY THERAPY

NEW!

TREATMENT OF HEMORRHOIDS

THERMOCOAGULATION

HEMORRHOIDS (DEGREE 1-4)

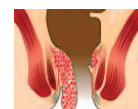

Millions of people around the world suffer from hemorrhoids and the number of patients is rapidly increasing. Did you know that more than 50% of all people suffer from hemorrhoids? Hemorrhoids which are not treated properly can gradually develop up to degree 3 or 4, which could result into an urgent need of a painful operation. With the HPR45i probe, all types of hemorrhoids can be treated easily and effectively!

Degree I

Degree II

Degree III

Degree IV

HEMORRHOIDS CAN NOW BE TREATED WITH THE NEW HPR45i PROBES

This new and improved method is easy to use and very effective on hemorrhoids degree I - 4. Treatments can be done in several sessions of 15-20 min under local anesthesia. Patients hardly experience any pain after treatment so minimal postoperative care is required and a swift return to normal daily activities is possible.

CLINICAL EVIDENCE

Clinical trials with this revolutionary method have been conducted in the Kriocentrum in Otwock, Poland, on a large patient population and have proven the effectiveness of the HPR45i probe. The procedures are rapid and minimally invasive for the patient.

160 patients were submitted to this method. The average number of sessions was 2 to 3 with a 95% reduction of the treated hemorrhoids. Local anesthesia is applied just before the intervention. All patients treated had hemorrhoids between 2 and 4. Most patients were very satisfied with the treatment and their instant relief of pain. They were able to return to their normal activities within 24 hours after the treatment.

Driven by R&D...

Innovation for Patients

EVRF stands for

- **Quick relief of symptoms.** Patients experience minimal discomfort and pain. Normal activity can be resumed within one day.
- **Excellent medical result.** EVRF® causes limited or no bleeding and is highly effective.

Innovation for Physicians

EVRF stands for

- **Convenience.** The advanced catheter coating and the specially designed tip allow a smooth ablation of the hemorrhoids.
- **Effectiveness & reliability.** At a 1-month follow-up, full relief of symptoms will usually be observed.
- **Safety.** The technique is minimally invasive and minimizes the risk for side effects.

Innovation for Healthcare

EVRF stands for

- **All-in-one.** The central unit is suited for use with different types of catheters and thus for removal of different types of veins and hemorrhoids.
- **Affordable solution.** Low investment cost for state-of-the-art equipment makes this tool unique in its kind.
- **No post-surgery care.** The treatment can be performed on an out-patient basis and thus hospitalization and work disability can be avoided.
